

Why more frames cannot help, and what can: the residual is bias, and two model families have opposite bias

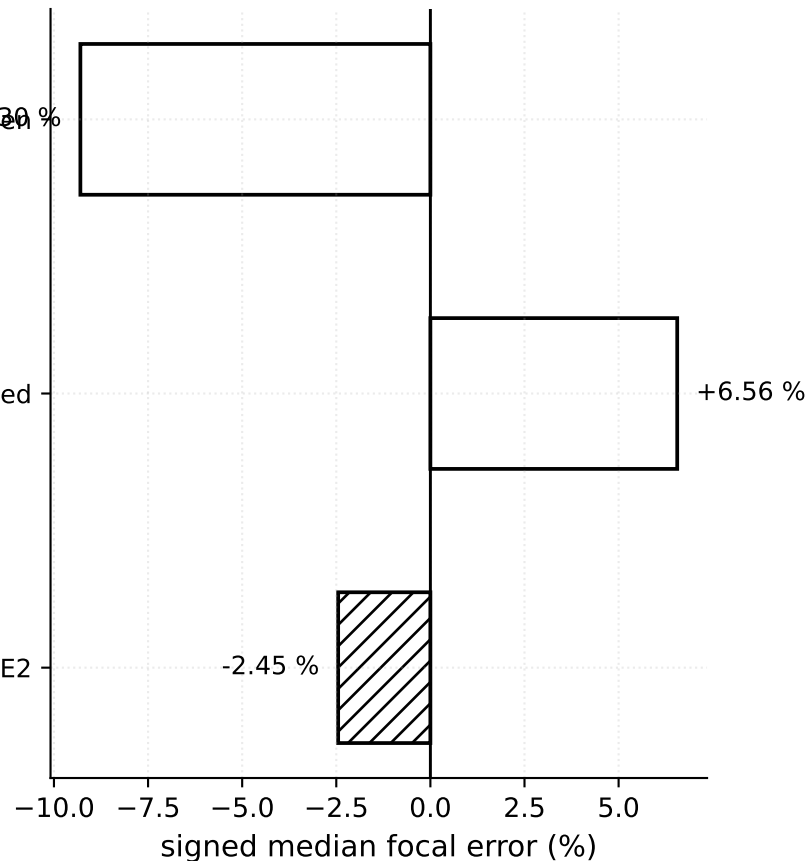

A. Where the error lives

B. Error at N = 8 frames

C. The two families err in opposite directions

Frozen E2 is an exploratory ensemble selected among five candidates on the same 175 views it is reported on; it is not a final proposed method. Its performance is quoted as 6.138 % (selection set), 6.46 % (independent re-run) and 5.73-8.797 % (leave-one-sequence-out).
